

The Montreal Lake Reserve and community is situated at the south end of Montreal Lake in central Saskatchewan. Crosby Hanna & Associates worked with Associated Engineering (Sask.) Ltd. to prepare a comprehensive community plan and five-year capital plan for the community. Preparation of this plan involved analysis of the natural resource base and determination of development suitability on the Reserve, demographic analysis and preparation of population projections, drafting of planning goals, objectives and policies, preparation and evaluation of alternative future land use concepts, a community consultation program and determination of a preferred future land use plan for the community.
