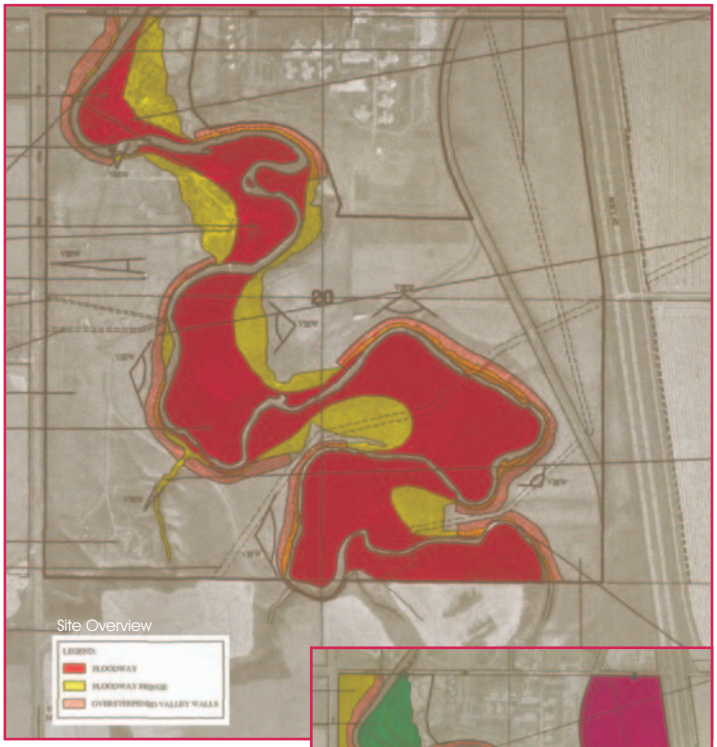
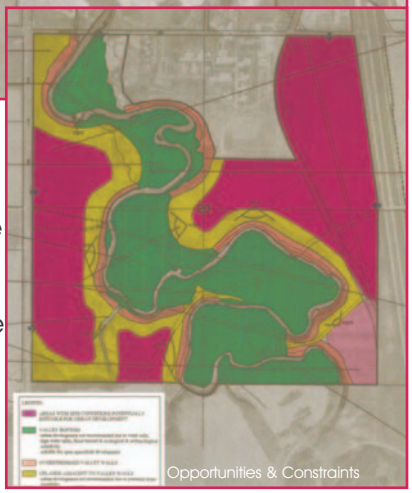
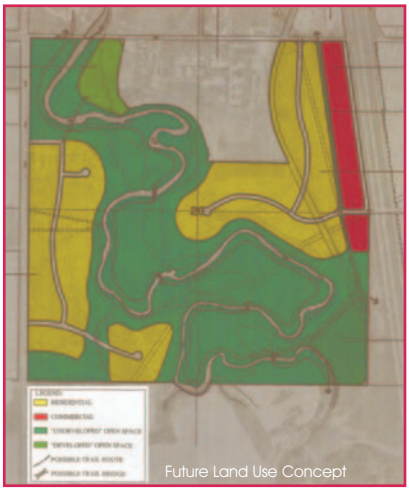
MOOSE JAW WILD ANIMAL PARK PROPERTY REDEVELOPMENT PLAN

MOOSE JAW 1999







The City of Moose Jaw retained Crosby Hanna & Associates to prepare an overall redevelopment plan for a 220-ha site along the Moose Jaw River at the south end of the City. The property had been previously used as a wild animal park and, with transfer of the lands to the City, there was a need to develop a vision for future use and development. The project involved documentation of the property's condition and context (including terrain conditions and flood hazards), consultation with stakeholders, preparation of land use concept options, public review of options and preparation of a recommended future land use concept (complete with recommended policies and zoning bylaw provisions).
