

24 Hour Lake Excavation

Crosby Hanna was part of a multi-disciplinary team charged with the task of deepening and revitalizing Wascana Lake. Crosby Hanna developed landscape plans for each of the areas

affected by the lake excavation project. 1.4million m3 of excavated fill was placed, graded and seeded to enlarge and enhance Wascana Hill, to create stabilization toe berms, create

Promenade Site Furniture

includes 3 viewpoints and multi-purpose gathering places as well as a major interpretive installation. The interpretive content, designed and produced by Wascana, required close coordination between the design team and Wascana. Carefully considered grading ensured that the visual integrity of the historic Albert Street Bridge was maintained.

Albert Street Promenade

Promenade Preparation

Crosby Hanna lead a multi-disciplinary team to design landscape improvements in Wascana Centre resulting from the Wascana Lake Revitalization Project. Key features included the Albert Street Promenade, Pine Island Development and related landscape development in the Broad Street area. Long term development plans were prepared for each area and priority elements were designed for implementation in accordance with available funding.

Pine Island Retaining Wall

Pine Island / Broad Street Development

Crosby Hanna, along with SaskEnergy, TransGas and the Wascana Centre Authority sponsored the volunteer planting of Spruce Island's new landscape. Crosby Hanna assisted with project coordination and provided planning and design services as well as layout assistance. Plant material was provided by TransGas and Wascana. Volunteers from the sponsoring agencies completed the planting during a one-day community event. Over 500 young trees, predominately spruce, were planted to begin restoring the evergreen character of Spruce Island.

Crosby Hanna celebrated the event with a poster prepared for Wascana to distribute as part of their volunteer recognition program.

Pine Island / Broad Street Development

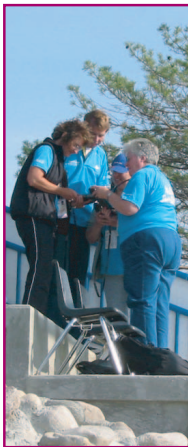

Landscape development in the Broad Street area included new grading and pedestrian pathways, including the Broad Street pedestrian underpass. Site furniture and lighting, seeding, sod and irrigation as well as the first phase of a long term planting program were included in the work. A derelict parking lot was reconstructed and other infrastructure improvements were done.

Judges' Stand

Pine Island Boardwalk

Pine Island was created from an abandoned bridge abutment. The island's principal function is to provide a finish line venue for competitive rowing, canoe and kayak events, while providing recreational amenities for daily use. Key features include a permanent Judge's Stand, a large boardwalk and hillside viewing lawn to accommodate spectators, a water screen with pedestrian access beneath, pathways, site furniture and lighting, lawns and extensive planting areas dominated by Pine species.
